# DURACELL STARTER

## QUALITY & RELIABILITY

**The gateway to the top quality world of the Duracell brand.** The Duracell Starter, which is equipped according to the latest standards, is the ideal first choice for customers seeking optimum performance at a super price. The Duracell Starter fulfils this wish to perfection, as it offers a combination of reliable power for every cold start, zero-maintenance due to modern full calcium technology, and maximum safety. The latter is ensured

by 4-chamber leak protection, which prevents vibration-related, battery acid escapes, together with a central venting system and a welded-in, captive flame arrester. Clear product coding with UK numbering and EN/SAE cold cranking values, as well as a range of 12 battery types from 44Ah to 95Ah, also demonstrate the universal suitability of this high value battery.

### Proven safety. 4-chamber leak protection

# DURACELL ADVANCED

## MORE POWER & LONGER LIFE

**Maximum power for starting and vehicle systems.** The Duracell Advanced is the embodiment of Duracell Automotive brand quality! This power pack meets the highest demands of leading vehicle manufacturers and is therefore the ideal battery for the modern car. Its design combines full calcium technology for increased starting power with the greatest possible safety. This is provided by a double lid, which prevents acid leaks even if the

battery is tipped up or rolled over, and combines improved safeguards against gas ignition and electrostatic discharge with dual option gas venting. The Duracell Advanced is ideal for modern SUVs and offers optimised cold cranking values, robust cyclic behaviour and zero-maintenance. 28 battery types also ensure suitability for virtually all European and Asian makes.

## DURACELL ADVANCED

Improved cold crank characteristics, maximum starting power

Zero maintenance owing to modern calcium technology

Offers high on-board power due to robust cyclic behaviour

Maximum leak and gas ignition protection, superior ESD-safety

Vibration resistant due to the bonding of the plates to the battery floor

28 battery types from 40Ah to 110Ah

Product coding with UK number and EN/SAE cold crank power

\* ESD = electrostatic discharges are disruptive voltage breakdowns caused by major potential differences. These discharges (sometimes visible due to sparks) create brief, electrical current surges and can lead to the ignition of flammable material. It is precisely this danger that the ESD plugs prevent with absolute safety.

# DURACELL EXTREME

## THE START/STOP SPECIALISTS

**EFB and AGM Technology for stop-start vehicles.** The Duracell Extreme is designed for use in environment-friendly vehicles fitted with a stop-start function. The enhanced flooded battery (EFB) is employed primarily in medium-sized and small cars, and for stop-start systems requiring a high energy input.

The absorbent glass mat (AGM) battery is installed mainly in medium-sized and luxury class vehicles requiring maximum power and fitted with stop-start systems and brake energy recuperation. Duracell Extreme premium products meet the demands of leading car manufacturers and with a range of seven types from 60Ah to 105Ah, are the first choice for fuel-efficient cars.

**Duracell Extreme –  
the modern power pack  
for stop-start vehicles**

**3x durability &  
cycle-resistance**

**2x durability &  
cycle-resistance**

### DURACELL EXTREME EFB

Cycle-resistant starter battery – 3 types with 60/70/80Ah

Twice the cycle resistance of standard batteries

Nonwoven cover on the separator and special active mass composition

Double lid for maximum leak protection and operational safety

Top V3 vibration resistance rating pursuant to EN 50342-1:2016

Zero maintenance owing to modern calcium technology

Product coding with UK number and EN/SAE cold crank power

### DURACELL EXTREME AGM

Valve-regulated, nonwoven glass mat battery (VRLA) –

4 types with 70/80/92/105Ah

Three times the cycle resistance of standard batteries

Leak-proof due to electrolyte bonding into a glass nonwoven (absorbent glass mat)

Zero maintenance owing to recombination technology

Very low internal resistance – maximum starting power

Installation in a lateral position possible (max. 90° angle)

Product coding with UK number and EN/SAE cold crank power

# DURACELL PROFESSIONAL

## THE POWER IN LONG-DISTANCE TRUCKS

The batteries employed for the electrical systems in commercial vehicles have to provide top performance on a daily basis and in addition, the steady increase in the number of comfort functions demands large quantities of energy. In particular, this applies when long-distance truck drivers remain in their vehicles overnight and use a very large number of power consumers. Moreover, if the battery is to be integrated into the rear section of the truck frame, it must be extremely robust and vibration-resistant.

**DURACELL's powerful response to these special demands comes in the shape of the new PROFESSIONAL EFB, which is all the more**

essential owing to the fact that the long-distance truck of today is no longer merely a means of transportation. In fact, it is both a workplace and frequently a home for up to five days at a stretch. Therefore, it is good to know that a strong electrical system battery can be relied upon to supply lighting, air conditioning, the kitchen unit, entertainment and many other comforts.

Please note when exchanging the battery that a vehicle fitted with an EFB battery may never be retrofitted with a conventional wet battery. Should battery replacement become necessary, always use an EFB battery with an identical box and performance class.

## PROFESSIONAL HD

Simple maintenance: externally visible electrolyte level markings, practical plugs

Robust design with set bonding

Envelope separator to protect against short circuits

Product coding with UK number and EN/SAE cold cranking power

Optimum price-performance ratio

## PROFESSIONAL SHD

Super Heavy Duty for extra cyclic and vibration resistance

Calcium technology ensures minimum water consumption

6 types from 110 to 225Ah

Superior safety: central degassing, external ignition protection, safety plugs

Improved leak protection for models 145/180/225Ah due to 4-chamber flat lid with a welded-in, captive arrester

Product coding with UK number and EN/SAE cold crank power

## PROFESSIONAL EFB

Increased cyclic resistance owing to an active mass recipe and non-woven, electrode sleeves

Robust design and optimum vibration resistance due to special set anchorage

Calcium technology for minimum water consumption

Maintenance-free (no topping-up with water) under normal operating conditions

Central degassing with integrated external ignition protection

Add-ons such as short circuit protection and ESD plugs\* for enhanced product safety

# DURACELL LEISURE

## DURABILITY & CYCLIC RESISTANCE

**Leisure batteries must provide guaranteed top performance over long periods and be insensitive to deep discharging and frequent recharging.**

With the “Leisure” product line Duracell offers a complete range of deep discharge resistant, wet batteries with superior power reserves, outstanding safety features and reduced water consumption, which are ideally combined in a robust and vibration-resistant design.

Therefore, Duracell Leisure batteries are ideal for every type of leisure and in particular camping, caravanning, mobile homes, boats and marine applications.

This is because these tough, leisure specialists can easily handle the toughest demands such as vibrations, heavy swell, extremely long-term loads such as those incurred during trolling, and severe tilting. They deliver on-board power reliably and whenever it is needed.

 RZS = external ignition protection

# DURACELL TRUST IS

Stationary heating	800 W
HIFI system, 4-channel amplifier	200 W
Radio with CD player	60 W
Air conditioning	100 W
Engine control/ignition	20 W
Fuel injection	100 W
Windscreen heating	1,000 W
Passenger compartment fan	150 W
Front windscreen wipers	80 W
Radiator fan	500 W
Headlights	130 W
Headlight washing system	50 W
Fog lamps	100 W
ESP / ABS	100 W
Steering wheel heating	50 W
Mobile navigation device	10 W

**IT'S HARD TO BELIEVE  
WHAT YOUR DURACELL  
BATTERY CAN DO!**

# DURACELL<sup>®</sup> S POWER.

50 W	Rear window wiper
40 W	Rear lights
40 W	Indicator lights
200 W	Rear window heating
60 W	Seat heating
40 W	Rear fog lights
30 W	Heated rear-view mirrors
100 W	Electric windows
2 W	I-pod
40 W	Heated washer nozzles
60 W	Fuel pump
180 W	Engine management
120 W	Steering booster pump
200 W	Oil pump
250 W	Water pump

## DURACELL TIP

We recommend the installation of the most powerful and hence largest battery that fits, as this provides additional performance reserves.

All the above values are averages.

The Duracell battery constitutes the heart of your car. It has been uncompromisingly designed for power, in order to provide top performance at any time. In modern cars, the energy demand of electronic consumers exceeds the capacity of the dynamo and therefore the battery is subject to additional burdens. Indeed, an electrical energy requirement of 5,000 V is not unusual.

**Power savings also conserve fuel.** The use of 100 W of electricity means fuel consumption of 0.1 l/100 km. Therefore it's best to switch off consumers when they are not needed!
